

I'm 75

Built in 1934

Some things are made to withstand the test of time

**75 Year Old Concrete Pavement
Glenwood Avenue
Raleigh, NC**

The Mission Statement for NCDOT is “Connecting people and places in North Carolina safely and efficiently with accountability and environmental sensitivity”. A key goal to accomplish this is to construct a “Long Lasting Infrastructure”. Concrete pavements are tough, durable, sustainable, and last longer than their design life.

The photo shows Glenwood Avenue, eastbound heading into Raleigh. The pavement was placed in **1934** and although it has received very little maintenance, it continues to perform very well.

The construction of concrete pavements is a major step toward satisfying DOT’s goal of producing a long lasting infrastructure. Withstand the test of time with concrete pavements.

For more information about concrete pavement benefits please call:
